Top Ways To Protect Your Remote Employees From Cyberthreats

Allowing employees to work remotely comes with its share of benefits, like increased productivity and employee happiness. But it comes with challenges as well, including staying ahead of cyberthreats. Here are three ways to protect remote employees who work from laptops, tablets and smartphones.

1. Avoid unsecured public WiFi. It may be convenient, but cybercriminals can use

2. Require endpoint security, such as firewalls and malware protection, installed on remote workers' devices. All remote employees should use the same endpoint security so you know everything is up-to-date.

3. Develop 'cyber security best practices' for your business. Everyone, including remote workers, should be on the same page when it comes to cyber security. Make sure your employees know the threats and how to stay vigilant online. *Inc., Feb. 12, 2019*

6 WAYS TO MAKE YOUR BUSINESS MORE EFFICIENT

- 1. Cut the clutter. Have any outdated systems and processes that are cluttering up your business? Get rid of them. Look for inefficiencies or redundancies you can eliminate, then do it!
- 2. Block interruptions. When you need to work, it's okay to put up barriers. Block out your calendar when you don't want calls. Turn off all

phone notifications. Only check e-mail twice a day. Set limits!

- 3. Look to automation. Whether you're scheduling e-mails or social media posts, look at what you can automate to avoid wasting time.
- 4. Balance tech and traditional. It's okay to rely on texting, e-mail and online chat to communicate with customers, but don't forget the power of real, face-to-face communication.
- 5. Say no to multitasking. Multitasking is a myth. You can either do several things at once and deliver mediocre results or do one thing right the first time and deliver stellar results.
- 6. Invest more in cyber security. There are countless threats out there, so don't get caught without good IT security across the whole of your business. Don't risk it! *Small Business Trends, Nov. 4, 2019*

Insider Tips To Make Your Business Run Faster, Easier And More Profitably

Start With Why

By Simon Sinek

Why do you do what you do? That's a fundamental question that makes up the basis of Simon Sinek's book Start With Why: How Great Leaders Inspire Everyone To Take Action.
When you ask that question of yourself and understand why you do what you do, the rest falls into place.

The book explores the ideas of "Why am I here?"

and "What is my higher purpose?" These are big questions, and they're important when it comes to defining who we are personally and professionally and what we really want to get out of our lives. There's a reason why Sinek has one of the most viewed TED Talks ever. His message is clear and makes complete sense. He translates his talk to paper so you can read and reference it again and again.

Top 3 Ways Hackers Will Attack Your Network — And They Are Targeting You RIGHT NOW

You might read the headline of this article and think, "That has to be an exaggeration." Unfortunately, it's not. Every single day, small businesses are targeted by cybercriminals. These criminals look for vulnerable victims, then attack.

This is the world we live in today. It's one where cybercriminals regularly take advantage of small businesses. Why small businesses? They're the favorite target of hackers, scammers and other cybercriminals because small businesses have a bad habit of NOT investing in cyber security.

Hackers have many methods they use to

break into your network, steal data or put you in a position where you have to pay them money to get your data back. They use a combination of software and skill to make it happen. Here are three ways hackers and cybercriminals attack your network in an attempt to get what they want.

THEY GO THROUGH YOUR EMPLOYEES.

That's right, they'll use your own employees against you, and your employees might not even realize what's happening. Let's say a hacker gets ahold of your internal e-mail list, like the e-mails you have posted on your

... continued from Cover

"Hackers are just looking for easy targets and, sadly, a lot of small businesses fit the bill."

website or LinkedIn. All the hacker has to do is send an e-mail to everyone at your company.

The e-mail might be disguised as a message addressed from you asking your employees for a gift card, which is becoming an increasingly common scam. Another e-mail tactic is making a message look like it's from a fellow employee, asking everyone else to open an attached file, which is likely malware or ransomware. A third e-mail scam is directing people to a phishing website, which is a website that scammers have designed to look like popular websites in order to get login information to hack accounts. All it takes is a single click from any employee to let the bad guys into your business.

THEY ATTACK YOUR **▲** ■ NETWORK DIRECTLY.

Some hackers aren't afraid of forced entry. Hackers and cybercriminals have access to black market tools and software that helps them get into networked devices - particularly unprotected networked devices.

For example, if you have a PC that's connected to the Internet and your network doesn't use any firewalls, data encryption or other network protection software, a hacker can break in and steal data from that PC and potentially other devices connected to that PC, such as portable hard drives. This method of entry isn't necessarily easy for hackers, but the effort can be worth it, especially if they can walk away with sensitive financial information.

THEY HOLD YOUR DATA HOSTAGE. ■ Hackers are relying on ransomware more and more to get what they want. Hackers rely on e-mail, executable files and fraudulent web ads (such as banner ads and popups) to attack networks with ransomware. It goes back to the first point. All it takes is someone clicking a bad link or file and the next thing you know, you're locked out of your network.

This has happened to dozens of businesses and even city governments in the last year alone. The thing is that even if you pay the

ransom, there is no guarantee the hacker will restore access. They can take the money and delete everything, leaving your business high

All of these points are why you need to take a hard look at IT security solutions and use securely backed up to the cloud and a hacker came in and tried to hold your data hostage, you wouldn't have to worry. They don't really have your data. You can tell them "no." then get your network back up and running while scrubbing it of any malware or ransomware. Then, it would be a simple matter of restoring commission for a day or two, but in the grand scheme of things, it's much better than losing your business to these jokers.

Hackers are just looking for easy targets and, investment that is truly worth it!

3 SIMPLE WAYS INTROVERTS LEVERAGE THEIR STRENGTHS TO THRIVE IN THE WORKPLACE

Introverts can be drained by social interaction and stimulation. They need to recharge regularly, so days off are important in order for them to be at their most productive. Here are three ways introverts can be at their best in the

- Manage energy more than your time. When you feel most energized, that's the right time to focus on creative work that requires more brainpower. Structure your days around your energy.
- Cultivate the right environment. Work in a space that calms you and energizes you. Set the right light (such as natural lighting) and invest in noise-canceling headphones.
- Say what needs to be said. Introverts constantly think but don't always speak up. Don't let communication fall to the wayside. Remember, we're all working together. Business Insider, Nov. 19, 2019

How To Market To Gen 7.

Generation Z is quickly becoming a major segment of the consumer space. Businesses must start marketing to this generation. They are tech-savvy, and they grew up with social media, so their phones and social connections mean everything. Here are three things to keep in mind when marketing to Gen Z.

Go to them. They aren't going to seek you out. They respond best to social media and mobile marketing. Don't pander, be personal and speak to what they get out of it.

Don't waste their time. Gen Z has a short attention span and skips walls of text and 30-second videos. Be fast and efficient. What are you selling and what are the benefits?

Avoid labels. Gen Z hates labels (including the label "Gen Z"). They don't want to be grouped with others or generalized. They value individuality immensely, so your marketing must reflect that. GENERA

The First Mistake Bad Leaders Make In A New Job

The first mistake bad leaders make in a new iob is subtle, common and avoidable; they come into an organization and they don't narrow the priority list.

In our research for Power Score, we found that only 24% of leaders are good at prioritizing. And when a leader is bad at prioritizing, 90% of the time it's because they let too many priorities stay alive.

In short, great leaders prune priorities.

What does priority pruning look like?

It looks like taking a weed whacker to the overgrown mass of useless priorities that grow inside organizations.

It looks like what Steve Jobs did when he returned to Apple and trimmed the number of products from hundreds to under 10.

It looks like what In-N-Out Burger (for those of you who have enjoyed this delicious West

Coast treat) does in only giving you a menu of burger, fries and a drink.

February 2020

It looks like what Scott Cook, founder of Intuit, did in making QuickBooks as easy as using your checkbook.

There are so many leaders I see who lack the analytical horsepower, the courage or the decisiveness to prune priorities, so they just let dozens, hundreds or even thousands of priorities live on in their organizations and distract people away from the small set of things that matter most.

If you want a simple way to prune priorities, use this one-page discussion guide straight out of our Power Score book (find that at geoffsmart.com/books/power-score-yourformula-for-leadership-success). Have your team rate your priorities 1-10. If you are scoring a nine or 10, keep doing what you are doing. If you score less than a nine, then it's time to get out the weed whacker!
